Display

Operation Instruction:

Activate the System: Touch the screen. The"---" will appear on the display. Then, press and hold the "M" button for 3 seconds. The current height will display and you can start operating the system.

Height Adjustment: Press and hold the up button to lift the desk. Press and hold the down button to lower the desk.

Timer: The timer is designed to inform users to stand up after a set period of time. Press the "T" button to set the period of time. The display will flash "0.5 h" for 0.5 hour. Each press of the "T" button leads to a 0.5 hour increment. The maximal setting of time is 2 hours. When the display stops flashing, then the period of time is successfully set and the indicator light on the top right of panel will be on. When the set time is up, the buzzer will beep to remind the user to stand. The timer will turn off automatically after a long beep. To cancel the timing, press "T" button for 5 times until the display shows the current height and the indicator light is off.

Memory Setting: Adjust the desk to your desired position. Press the "M" button, then "S-" appears on the display. Press "1 ", "2" or "3". The memory is successfully set. You can store up to 3 heights by repeating the same process.

Protective Standby Mode: If there is no operation for 1 minute, the system will enter the protective standby mode. To turn off the standby mode, press and hold the "M" button for 3 seconds. You can also press and hold the "M" button for 3 seconds to activate the standby mode, when you don't need to operate the system.

Power-saving Mode: When no actions are made for over 10 minutes, the system will enter power-saving mode. Press any button to enter operation mode.

Measurement Switch (cm/inch): Press "T" for 8s. The buzzer will beep twice. The measurement is changed from centimeter to inch. If you want to switch the measurement back to centimeters, press the "T" button again for 8s.

Reset Mode: While the system is reconnected, press the down button until ''RST" is displayed. Continue to press the button. The desk will move down and then raise a little bit. (Make sure you never release the button during the process.) After the movement stops, the system is successfully reset to the starting position.

Troubleshooting

This repair guide intends to help you identify and solve the minor problems caused by unusual operation of the electric system of our sit-stand desk. The simple procedures in this manual are easy to follow and capable of solving most common problems, that happen in everyday use.

If ER1/ER2/HOT/ER3/ER4/ER5 appear on the control panel, this is normally nothing to worry about, and is usually an indication, that the system has experienced activity, that is above the rated specifications. Simply follow the steps below, as most errors can be solved by user. If the problems aren't solved, please contact your point of purchase to replace components.

1. ER1 Troubleshooting

Step 1: Check if the desk is overloaded. If so, remove the items on the desktop and disconnect the power. If not, only disconnect the power.
Step 2: Wait for 10s, then reconnect the power cord.
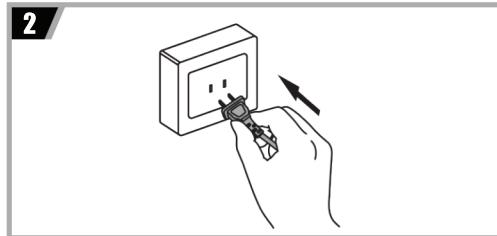

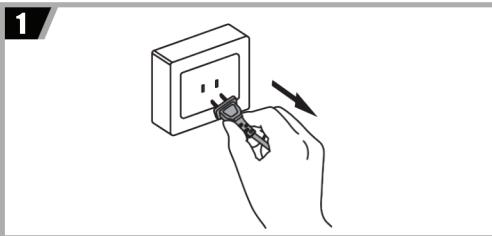

2. ER2/HOT Troubleshooting

Step 1: The system has experienced above-normal temperature. Allow your desk to cool down and remain idle for approximately 20 minutes. Never turn off the power during this process.
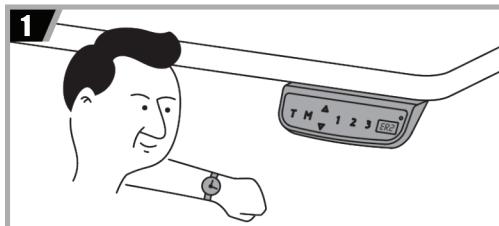

3. Overcurrent Protection

In addition, an over-current protection mode has been also programmed in this system. When the electricity is over the rated specification, the system will enter this mode. If the mode activates, the desk will lower approximately 30mm and stop with the height displayed.
This is only an introduction of the function of the downward movement. No troubleshooting is required when this happens.
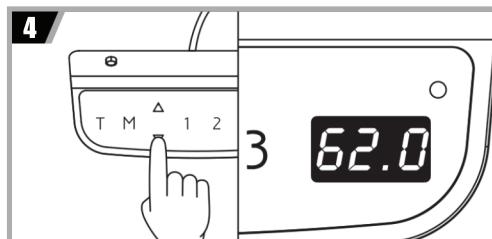

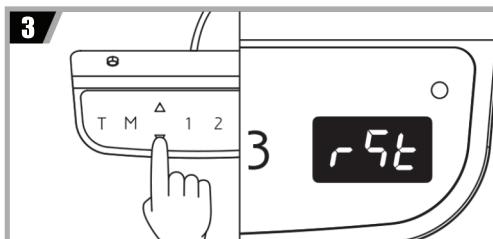

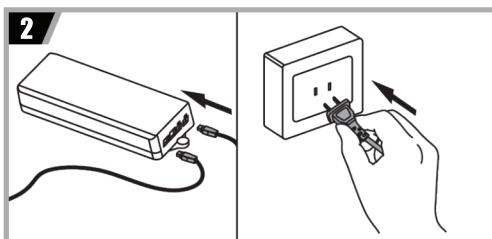

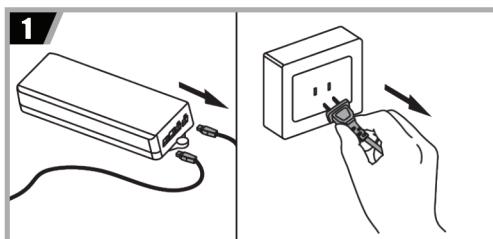

4. Control Panel Problems

If the control panel is not responding or you can not adjust the desk, please check if the desk is properly pluged into the power outlet.
If it is, try to turn the power off and on again, to see if the issue is fixed. If the controler is still not responding, please contact the support.
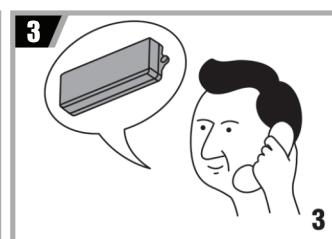

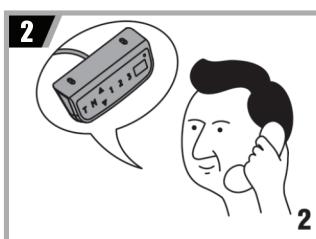

5. ER3/ER4/ER5 Troubleshooting

Step 1: The system has experienced unusual electrical problems. First, disconnect the motor cords and power.
**Step 2:** Wait for 10s, then reconnect the cords.
Step 3: Press and hold the down button until the image appears, and continue to press the button. The desk will move down and then raise a little bit. Make sure you never release the button during the process.
Step 4: Release the button after the movement stops.

6. Lifting Columns Can't Operate

If the desk, after confirming the control panel works properly, still doesn't work, please turn the power off and restart the system.
If it still doesn't work, please contact support for service or repair to your unit.
